The Science Myth: God, Society, the Self and What We Will Never Know. Dominique Chu

We are in the midst of a culture war between science and religion. In this struggle science portrays itself as the white knight of enlightenment truth defending humanity against the dark forces of religious fundamentalism, ignorance and gullibility that threaten free thinking and progress. But is there really the fundamental difference between science and religion that the culture warriors like us to believe? This book takes the reader on an inside journey through science showing how scientific beliefs are made. It will show science as a human activity that is shaped by power struggles, personal interests, cultural prejudices, beliefs and values...and yes, experimental data as well.
