## **The New Eco-Architecture: Alternatives from the Modern Movement** Colin Porteous

*The New Eco-Architecture* builds a historical bridge between architectural science and design. It seeks to address neglected aspects of the Modern Movement as a prelude to supporting a diversity of architectural insight and experimentation aimed at twenty-first century environmental needs and priorities. The attitudes and influences of renowned figures are re-examined in relation to current issues of architectural sustainability.

By setting today's green architectural quest within a twentieth century context, and evaluating the main protagonists with regard to a modern eco-sensitive lineage, the book will be of primary interest to architectural students, academics and practitioners. However, it should also intrigue historians, theoreticians and critics, who tend to gloss over such issues, as well as other disciplines engaged with the built environment.
