Computational Statistical Mechanics (Studies in Modern Thermodynamics) W.G. Hoover

Computational Statistical Mechanics describes the use of fast computers to simulate the equilibrium and nonequilibrium properties of gases, liquids, and solids at, and away from equilibrium. The underlying theory is developed from basic principles and illustrated by applying it to the simplest possible examples.

Thermodynamics, based on the ideal gas thermometer, is related to Gibb's statistical mechanics through the use of Nosé-Hoover heat reservoirs. These reservoirs use integral feedback to control temperature. The same approach is carried through to the simulation and analysis of nonequilibrium mass, momentum, and energy flows. Such a unified approach makes possible consistent mechanical definitions of temperature, stress, and heat flux which lead to a microscopic demonstration of the Second Law of Thermodynamics directly from mechanics. The intimate connection linking Lyapunov-unstable microscopic motions to macroscopic dissipative flows through multifractal phase-space structures is illustrated with many examples from the recent literature.

The book is well-suited for undergraduate courses in advanced thermodynamics, statistical mechanic and transport theory, and graduate courses in physics and chemistry.

From reader reviews:

Sheila Rocha:

Why don't make it to be your habit? Right now, try to ready your time to do the important work, like looking for your favorite book and reading a book. Beside you can solve your short lived problem; you can add your knowledge by the publication entitled Computational Statistical Mechanics (Studies in Modern Thermodynamics). Try to stumble through book Computational Statistical Mechanics (Studies in Modern Thermodynamics) as your pal. It means that it can to become your friend when you really feel alone and beside that of course make you smarter than ever. Yeah, it is very fortunated for you. The book makes you a lot more confidence because you can know anything by the book. So , we need to make new experience and also knowledge with this book.

Oliver Crites:

Have you spare time to get a day? What do you do when you have far more or little spare time? Yes, you can choose the suitable activity intended for spend your time. Any person spent all their spare time to take a move, shopping, or went to often the Mall. How about open or perhaps read a book entitled Computational Statistical Mechanics (Studies in Modern Thermodynamics)? Maybe it is for being best activity for you. You already know beside you can spend your time together with your favorite's book, you can cleverer than before. Do you agree with it has the opinion or you have additional opinion?

Elizabeth Frizzell:

Now a day individuals who Living in the era everywhere everything reachable by connect to the internet and the resources in it can be true or not need people to be aware of each data they get. How individuals to be smart in obtaining any information nowadays? Of course the answer is reading a book. Looking at a book can help people out of this uncertainty Information especially this Computational Statistical Mechanics (Studies in Modern Thermodynamics) book because book offers you rich details and knowledge. Of course the data in this book hundred percent guarantees there is no doubt in it everbody knows.

John Dussault:

People live in this new morning of lifestyle always attempt to and must have the time or they will get wide range of stress from both day to day life and work. So , whenever we ask do people have extra time, we will say absolutely indeed. People is human not just a robot. Then we ask again, what kind of activity have you got when the spare time coming to you actually of course your answer may unlimited right. Then ever try this one, reading books. It can be your alternative with spending your spare time, often the book you have read is actually Computational Statistical Mechanics (Studies in Modern Thermodynamics).
