A Measure of Success: The Influence of Curriculum-Based Measurement on Education Miya Miura Wayman

Simple in concept, far-reaching in implementation, Curriculum-Based Measurement (CBM) was developed in the 1980s as an efficient way to assess the progress of struggling students, including those with disabilities. Today, there are few areas of special education policy and practice that have not been influenced by CBM progress monitoring. The impact of CBM is reflected in recent education reforms that emphasize improvements in assessment and data-based decision making. Gathering an international group of leading researchers and practitioners, *A Measure of Success* provides a comprehensive picture of the past, present, and possible future of CBM progress monitoring. The book will be instrumental for researchers and practitioners in both general and special education, particularly those involved in the rapidly growing Response to Intervention (RTI) approach, an approach used to determine the performance and placement of students with learning difficulties.

A Measure of Success presents a nuanced examination of CBM progress monitoring in reading, math, and content-area learning to assess students at all levels, from early childhood to secondary school, and with a wide range of abilities, from high- and low-incidence disabilities to no disabilities. This study also evaluates how the approach has affected instructional practices, teacher training, psychology and school psychology, educational policy, and research in the United States and beyond.

Timely and unique, this volume will interest anyone in education who wants to harness the potential advantage of progress monitoring to improve outcomes for students.
