Structured Peer-to-Peer Systems: Fundamentals of Hierarchical Organization, Routing, Scaling, and Security Dmitry Korzun, Andrei Gurtov

The field of structured P2P systems has seen fast growth upon the introduction of Distributed Hash Tables (DHTs) in the early 2000s. The first proposals, including Chord, Pastry, Tapestry, were gradually improved to cope with scalability, locality and security issues. By utilizing the processing and bandwidth resources of end users, the P2P approach enables high performance of data distribution which is hard to achieve with traditional client-server architectures. The P2P computing community is also being actively utilized for software updates to the Internet, P2PSIP VoIP, video-on-demand, and distributed backups. The recent introduction of the identifier-locator split proposal for future Internet architectures poses another important application for DHTs, namely mapping between host permanent identity and changing IP address. The growing complexity and scale of modern P2P systems requires the introduction of hierarchy and intelligence in routing of requests.

Structured Peer-to-Peer Systems covers fundamental issues in organization, optimization, and tradeoffs of present large-scale structured P2P systems, as well as, provides principles, analytical models, and simulation methods applicable in designing future systems. Part I presents the state-of-the-art of structured P2P systems, popular DHT topologies and protocols, and the design challenges for efficient P2P network topology organization, routing, scalability, and security. Part II shows that local strategies with limited knowledge per peer provide the highest scalability level subject to reasonable performance and security constraints. Although the strategies are local, their efficiency is due to elements of hierarchical organization, which appear in many DHT designs that traditionally are considered as flat ones. Part III describes methods to gradually enhance the local view limit when a peer is capable to operate with larger knowledge, still partial, about the entire system. These methods were formed in the evolution of hierarchical organization from flat DHT networks to hierarchical DHT architectures, look-ahead routing, and topology-aware ranking. Part IV highlights some known P2P-based experimental systems and commercial applications in the modern Internet. The discussion clarifies the importance of P2P technology for building present and future Internet systems.

From reader reviews:

Mona Savoy:

Spent a free time and energy to be fun activity to perform! A lot of people spent their spare time with their family, or their own friends. Usually they performing activity like watching television, likely to beach, or picnic in the park. They actually doing ditto every week. Do you feel it? Do you want to something different to fill your own free time/ holiday? Might be reading a book can be option to fill your no cost time/ holiday. The first thing you will ask may be what kinds of publication that you should read. If you want to test look for book, may be the guide untitled Structured Peer-to-Peer Systems: Fundamentals of Hierarchical Organization, Routing, Scaling, and Security can be very good book to read. May be it can be best activity to you.

Albert Christensen:

Why? Because this Structured Peer-to-Peer Systems: Fundamentals of Hierarchical Organization, Routing, Scaling, and Security is an unordinary book that the inside of the publication waiting for you to snap it but latter it will jolt you with the secret it inside. Reading this book adjacent to it was fantastic author who write the book in such awesome way makes the content inside of easier to understand, entertaining approach but still convey the meaning totally. So , it is good for you because of not hesitating having this nowadays or you going to regret it. This unique book will give you a lot of rewards than the other book have such as help improving your skill and your critical thinking technique. So , still want to hesitate having that book? If I have been you I will go to the publication store hurriedly.

Colin Rousey:

That publication can make you to feel relax. This specific book Structured Peer-to-Peer Systems: Fundamentals of Hierarchical Organization, Routing, Scaling, and Security was multi-colored and of course has pictures on there. As we know that book Structured Peer-to-Peer Systems: Fundamentals of Hierarchical Organization, Routing, Scaling, and Security has many kinds or category. Start from kids until young adults. For example Naruto or Private eye Conan you can read and think you are the character on there. Therefore not at all of book usually are make you bored, any it offers you feel happy, fun and relax. Try to choose the best book in your case and try to like reading in which.

Kelly Jackson:

Book is one of source of expertise. We can add our information from it. Not only for students but also native or citizen require book to know the up-date information of year to be able to year. As we know those books have many advantages. Beside many of us add our knowledge, could also bring us to around the world. By the book Structured Peer-to-Peer Systems: Fundamentals of Hierarchical Organization, Routing, Scaling, and Security we can get more advantage. Don't one to be creative people? To be creative person must like to read a book. Just simply choose the best book that appropriate with your aim. Don't become doubt to change your

life with this book Structured Peer-to-Peer Systems: Fundamentals of Hierarchical Organization, Routing, Scaling, and Security. You can more desirable than now.
