Beginning with an overview of the current understanding of the pathophysiology of GERD, the book moves onto new information regarding tissue susceptibility, the role of bile and digestive enzymes, and cyclic changes in LES tone. Other chapters are devoted to standard therapeutic options for GERD, pharmacologic therapy, and surgery. Newer endoscopic treatments (Stretta, Endocinch, injection of bulking agents, etc) are also described. Subsequent chapters focus on the causes for failure of medical, endoscopic, and surgical therapies.
