BIM for Structural Engineering and Architecture

Building Information Modeling: Framework for Structural Design outlines one of the most promising new developments in architecture, engineering, and construction (AEC). Building information modeling (BIM) is an information management and analysis technology that is changing the role of computation in the architectural and engineering industries. The innovative process constructs a database assembling all of the objects needed to build a specific structure. Instead of using a computer to produce a series of drawings that together describe the building, BIM creates a single illustration representing the building as a whole. This book highlights the BIM technology and explains how it is redefining the structural analysis and design of building structures.

BIM as a Framework Enabler

This book introduces a new framework—the structure and architecture synergy framework (SAS framework)—that helps develop and enhance the understanding of the fundamental principles of architectural analysis using BIM tools. Based upon three main components: the structural melody, structural poetry, and structural analysis, along with the BIM tools as the frame enabler, this new framework allows users to explore structural design as an art while also factoring in the principles of engineering. The framework stresses the influence structure can play in form generation and in defining spatial order and composition. By highlighting the interplay between architecture and structure, the book emphasizes the conceptual behaviors of structural systems and their aesthetic implications and enables readers to thoroughly understand the art and science of whole structural system concepts.

- Presents the use of BIM technology as part of a design process or framework that can lead to a more comprehensive, intelligent, and integrated building design
- Places special emphasis on the application of BIM technology for exploring the intimate relationship between structural engineering and architectural design
- Includes a discussion of current and emerging trends in structural engineering practice and the role of the structural engineer in building design using new BIM technologies

Building Information Modeling: Framework for Structural Design provides a thorough understanding of architectural structures and introduces a new framework that revolutionizes the way building structures are designed and constructed.

From reader reviews:

Tonya Hooper:

The event that you get from Building Information Modeling: Framework for Structural Design may be the more deep you searching the information that hide in the words the more you get enthusiastic about reading it. It doesn't mean that this book is hard to recognise but Building Information Modeling: Framework for Structural Design giving you buzz feeling of reading. The article author conveys their point in a number of way that can be understood through anyone who read the item because the author of this publication is well-known enough. That book also makes your current vocabulary increase well. So it is easy to understand then can go along with you, both in printed or e-book style are available. We highly recommend you for having this particular Building Information Modeling: Framework for Structural Design instantly.

Christine Willis:

Reading a guide tends to be new life style on this era globalization. With reading you can get a lot of information which will give you benefit in your life. Along with book everyone in this world could share their idea. Publications can also inspire a lot of people. A lot of author can inspire their own reader with their story or maybe their experience. Not only the storyplot that share in the books. But also they write about the data about something that you need illustration. How to get the good score toefl, or how to teach your children, there are many kinds of book which exist now. The authors on this planet always try to improve their ability in writing, they also doing some study before they write with their book. One of them is this Building Information Modeling: Framework for Structural Design.

Karen Strickland:

Why? Because this Building Information Modeling: Framework for Structural Design is an unordinary book that the inside of the book waiting for you to snap this but latter it will shock you with the secret the idea inside. Reading this book beside it was fantastic author who all write the book in such incredible way makes the content inside of easier to understand, entertaining approach but still convey the meaning totally. So , it is good for you because of not hesitating having this any more or you going to regret it. This unique book will give you a lot of benefits than the other book possess such as help improving your expertise and your critical thinking approach. So , still want to hesitate having that book? If I were being you I will go to the publication store hurriedly.

Edward Emory:

You will get this Building Information Modeling: Framework for Structural Design by visit the bookstore or Mall. Just viewing or reviewing it may to be your solve problem if you get difficulties for the knowledge. Kinds of this publication are various. Not only by written or printed but also can you enjoy this book by simply e-book. In the modern era such as now, you just looking by your mobile phone and searching what their problem. Right now, choose your own ways to get more information about your reserve. It is most

important to arrange you to ultimately make your knowledge are still revise. Let's try to choose appropriate ways for you.
