**Teaching Engineering** Phillip C. Wankat, Frank S. Oreovicz

The majority of professors have never had a formal course in education, and the most common method for learning how to teach is on-the-job training. This represents a challenge for disciplines with ever more complex subject matter, and a lost opportunity when new active learning approaches to education are yielding dramatic improvements in student learning and retention.

This book aims to cover all aspects of teaching engineering and other technical subjects. It presents both practical matters and educational theories in a format useful for both new and experienced teachers. It is organized to start with specific, practical teaching applications and then leads to psychological and educational theories. The "practical orientation" section explains how to develop objectives and then use them to enhance student learning, and the "theoretical orientation" section discusses the theoretical basis for learning/teaching and its impact on students.

Written mainly for PhD students and professors in all areas of engineering, the book may be used as a text for graduate-level classes and professional workshops or by professionals who wish to read it on their own. Although the focus is engineering education, most of this book will be useful to teachers in other disciplines. Teaching is a complex human activity, so it is impossible to develop a formula that guarantees it will be excellent. However, the methods in this book will help all professors become good teachers while spending less time preparing for the classroom.

This is a new edition of the well-received volume published by McGraw-Hill in 1993. It includes an entirely revised section on the Accreditation Board for Engineering and Technology (ABET) and new sections on the characteristics of great teachers, different active learning methods, the application of technology in the classroom (from clickers to intelligent tutorial systems), and how people learn.

**From reader reviews:**

**Sharon Stennis:**

Reading a e-book can be one of a lot of activity that everyone in the world enjoys. Do you like reading book therefore. There are a lot of reasons why people enjoyed. First reading a guide will give you a lot of new info. When you read a reserve you will get new information simply because book is one of a number of ways to share the information or their idea. Second, studying a book will make an individual more imaginative. When you reading through a book especially fiction book the author will bring someone to imagine the story how the characters do it anything. Third, you could share your knowledge to other people. When you read this Teaching Engineering, you may tells your family, friends as well as soon about yours guide. Your knowledge can inspire average, make them reading a guide.

**Elmer August:**

People live in this new moment of lifestyle always try to and must have the extra time or they will get wide range of stress from both way of life and work. So , if we ask do people have free time, we will say absolutely yes. People is human not a robot. Then we question again, what kind of activity do you possess when the spare time coming to you actually of course your answer will certainly unlimited right. Then do you try this one, reading textbooks. It can be your alternative within spending your spare time, the particular book you have read will be Teaching Engineering.

**Gertrude Knudsen:**

Do you have something that you like such as book? The publication lovers usually prefer to pick book like comic, quick story and the biggest some may be novel. Now, why not striving Teaching Engineering that give your enjoyment preference will be satisfied simply by reading this book. Reading behavior all over the world can be said as the opportunity for people to know world a great deal better then how they react in the direction of the world. It can't be explained constantly that reading habit only for the geeky man or woman but for all of you who wants to end up being success person. So , for all you who want to start reading through as your good habit, you could pick Teaching Engineering become your starter.

**Laverne Dunbar:**

Are you kind of hectic person, only have 10 or perhaps 15 minute in your time to upgrading your mind talent or thinking skill perhaps analytical thinking? Then you have problem with the book in comparison with can satisfy your short space of time to read it because all of this time you only find guide that need more time to be study. Teaching Engineering can be your answer given it can be read by you who have those short spare time problems.
