Analysis, Control and Optimal Operations in Hybrid Power Systems: Advanced Techniques and Applications for Linear and Nonlinear Systems (Green Energy and Technology)

Analysis, Control and Optimal Operations in Hybrid Power Systems: Advanced Techniques and Applications for Linear and Nonlinear Systems (Green Energy and Technology)

The book's text focuses on explaining and analyzing the dynamic performance of linear and nonlinear systems, in particular for Power Systems (PS) including Hybrid Power Sources (HPS). The system stability is important for both PS operation and planning. Placing emphasis on understanding the underlying stability principles, the book opens with an exploration of basic concepts using mathematical models and case studies from linear and nonlinear system, and continues with complex models and algorithms from field of PS. The book's features include: (1) progressive approach from simplicity to complexity, (2) deeper look into advanced aspects of stability theory, (3) detailed description of system stability using state space energy conservation principle, (4) review of some research in the field of PS stability analysis, (5) advanced models and algorithms for Transmission Network Expansion Planning (TNEP), (6) Stability enhancement including the use of Power System Stabilizer (PSS) and Flexible Alternative Current Transmission Systems (FACTS), and (7) examination of the influence of nonlinear control on fuel cell HPS dynamics.

The book will be easy to read and understand and will be an essential resource for both undergraduate and graduate students in electrical engineering as well as to the PhDs and engineers from this field. It is also a clear and comprehensive reference text for undergraduate students, postgraduate and research students studying power systems, and also for practicing engineers and researchers who are working in electricity companies or in the development of power system technologies. All will appreciate the authors' accessible approach in introduction the power system dynamics and stability from both a mathematical and engineering viewpoint.

From reader reviews:

Robert Gibson:

Why don't make it to be your habit? Right now, try to prepare your time to do the important take action, like looking for your favorite e-book and reading a publication. Beside you can solve your condition; you can add your knowledge by the reserve entitled Analysis, Control and Optimal Operations in Hybrid Power Systems: Advanced Techniques and Applications for Linear and Nonlinear Systems (Green Energy and Technology). Try to stumble through book Analysis, Control and Optimal Operations in Hybrid Power Systems: Advanced Techniques and Applications for Linear and Nonlinear Systems (Green Energy and Technology) as your friend. It means that it can to become your friend when you truly feel alone and beside that course make you smarter than in the past. Yeah, it is very fortunated in your case. The book makes you more confidence because you can know everything by the book. So , let me make new experience along with knowledge with this book.

Curtis Russell:

Book will be written, printed, or created for everything. You can realize everything you want by a guide. Book has a different type. As you may know that book is important matter to bring us around the world. Close to that you can your reading proficiency was fluently. A publication Analysis, Control and Optimal Operations in Hybrid Power Systems: Advanced Techniques and Applications for Linear and Nonlinear Systems (Green Energy and Technology) will make you to end up being smarter. You can feel much more confidence if you can know about every thing. But some of you think this open or reading any book make you bored. It is not make you fun. Why they could be thought like that? Have you trying to find best book or ideal book with you?

Dan Villanueva:

Information is provisions for anyone to get better life, information nowadays can get by anyone in everywhere. The information can be a expertise or any news even a huge concern. What people must be consider when those information which is inside the former life are challenging to be find than now's taking seriously which one would work to believe or which one typically the resource are convinced. If you have the unstable resource then you understand it as your main information we will see huge disadvantage for you. All of those possibilities will not happen throughout you if you take Analysis, Control and Optimal Operations in Hybrid Power Systems: Advanced Techniques and Applications for Linear and Nonlinear Systems (Green Energy and Technology) as your daily resource information.

Richard Valadez:

Spent a free the perfect time to be fun activity to do! A lot of people spent their sparetime with their family, or their very own friends. Usually they undertaking activity like watching television, gonna beach, or picnic

from the park. They actually doing same every week. Do you feel it? Would you like to something different to fill your own free time/ holiday? Might be reading a book can be option to fill your free time/ holiday. The first thing that you'll ask may be what kinds of book that you should read. If you want to test look for book, may be the book untitled Analysis, Control and Optimal Operations in Hybrid Power Systems: Advanced Techniques and Applications for Linear and Nonlinear Systems (Green Energy and Technology) can be very good book to read. May be it might be best activity to you.
