Structured products are financial instruments that are engineered to meet specific investment objectives. In this comprehensive new book, financial engineering expert John Braddock provides both technical and non-technical readers with valuable insights into some of today's most innovative financial instruments.

Essential tools used by many financial professionals, these non-traditional securities—whose values are linked to, or "derived" from, such underlying assets as stocks, bonds, currencies, and commodities—are increasingly available to investors at every level. Structured products can facilitate the movement of risk exposure into and out of investment portfolios with greater efficiency than many conventional securities. And due to their sensitivity to price fluctuations, they often provide investors with early insights into the behavior of the assets and markets on which they are based.

Beginning with a thorough and timely overview of the main types of structured products in use today—how and why they are used, investment risks, and customer suitability requirements—*Derivatives Demystified:*

Using Structured Financial Products also offers an extensive examination of the development and marketing process and the responsibilities of officers and directors overseeing derivative transactions. With up-to-date and authoritative explanations, it is packed with essential information on:

- Warrants and index linked notes
- Convertible securities and equity linked notes
- Exotic and custom-made options
- Monetization and hedging strategies for restricted or low cost basis stock

A key element of Derivatives Demystified: Using Structured Financial Products is the special Resource Guide. This unique section provides valuable information on many important aspects of financial engineering, including the investment banking, marketing, and underwriting activities that relate to the creation of structured products.
